I congratulate the authors on such an interesting and timely article. However, I suggest some revisions. The work addresses not only sugarcane bagasse but also other lignocellulosic biomasses. So, think a little about expanding the topic. Although there are abbreviations at the end, it is interesting for the reader to have the first description in the text before the acronym. Some figures need to be revised due to lack of information and tables better formatted. Be careful with the presentation and uniformity of units. Other informations are in the file attachment
