Efficacy of *Anogeissus leiocarpus* as a therapeutic agent for some pathogenic bacteria.

1. Under materials and methods, phytochemical analysis is well described, and the steps of how the antibacterial procedure was done are also shown.
2. There are, however, small grammar mistakes and a few words that are missing to link statements.
3. There are 2 references which are missing and 6 which are not in the text. Can the writers look into the references and correct them?
4. The plant species chosen here is a very important plant in the sense that it has many medicinal uses in the treatment of various diseases by traditional healers around the world. *A. leiocarpus* could provide new leads for modern drug design for curing different ailments.
5. The manuscript is well written in the sense that it flows from the introduction and allows one to understand the procedures involved to get the results they obtained.
