Thanks for the authors for providing the introduction of the intelligent transportation system. This paper is easy to follow. However, there are many obvious limitations as follows:

- 1: The limited innovative of the proposed system. Tracking the real-time location of the vehicle became popular several years ago. The authors cannot demonstrate the the innovative of the proposed system.
- 2: The integration of the GPS data occupies most of the introduction section. However, integrating the GPS data for vehicle tracking is not innovative enough to be the contribution of the proposed system.
