Fibroblast Growth Factor Receptor Family Isoform IIIc

National Cancer Institute

Source

National Cancer Institute. *Fibroblast Growth Factor Receptor Family Isoform IIIc*. NCI Thesaurus. Code C121506.

An isoform of fibroblast growth factor receptor-1, -2, or -3, where alternative splicing leads the expression of the IIIc exon encoding the second half of the third immunoglobulin-like domain, which is located in the extracellular domain of these receptors. This variant is expressed in mesenchymal lineage cells and has differential ligand binding activity when compared to the IIIa and IIIb forms.
