

Peer Review

Review of: "Indian Health Ministry Refuses to Make Cancer a Notifiable Disease Despite ICMR's Recommendation"

Ekta Chaudhary¹

1. Department cum National Centre for Human Genome Studies, Panjab University, India

The article under review discusses the significance of declaring cancer as a notifiable disease. The author successfully conveys the intended message, addressing an important public health issue.

Key Strengths

Clear Delivery of Message:

The author effectively communicates the importance of recognizing cancer as a notifiable disease. The key arguments are well-articulated, leaving a strong impression on the reader.

Presentation Quality:

The article is well-structured and easy to follow. The flow of information ensures that readers can grasp the concepts without difficulty.

Writing Style:

The writing is concise and engaging, maintaining the reader's interest throughout the article.

Areas for Improvement

Depth of Research:

While the article delivers its message clearly, a more comprehensive exploration of the topic would have strengthened the argument. Incorporating a broader range of studies and data could provide additional credibility and depth to the discussion.

Evidence and Examples:

The inclusion of more specific examples or case studies would enhance the reader's understanding of

the practical implications of declaring cancer as a notifiable disease.

Conclusion

The article is well-presented and succeeds in conveying its central message. However, the inclusion of more comprehensive research and detailed examples would elevate its overall impact. Despite these minor shortcomings, the article is an insightful contribution to the discourse on public health policies concerning cancer.

I recommend accepting the article with minor modifications for publication.
