Dear authors,

Thanks for the invitation to review this research. The authors used TPB and NAM model to proposed the pro-environment purchase behavior. I enjoyed reading this manuscript, and believe that it is very promising. At the same time, I identified several issues that require the authors attention.

In the introduction part: It should provide an overview of how shopping bag influence the environment. It's means the propose of this research is not clear.

In the Theoretical model and hypotheses part: The presentation of a good literature review needs a logical and clear structure for a rich understanding. In this research, the structure of literature review is not really clear.

In the Method part: The lack of reliability and validity data are the more obvious shortcomings, please add the related table.

In the Discussion part: Discussion part is very weak. Authors need to analysis the result in detail.
