First, I would like to thank the editors for giving me the privilege to review the article titled " Pain assessment and management for older patients with hip fractures"

Dear Author/Authors

Congratulations on your effort in such a less discussed aspect of medicine.

Reviewing the paper, I believe it is satisfactory and needs revisions to increase the strength of the manuscript.

Kindly note the following corrections I would request you to consider.

1. First, unfortunately, it's full of spelling, and grammar mistakes that should be corrected.
2. Could you please discuss more about the pros and cons of the two distinct methods that you talked about ?
3. It would be better if you could add a Comparative table about the two procedures.
4. You declared that the fascia-iliaca blocks method is safer in line 13 of part iii, but also in line 16, you said that the femoral nerve blocks method has fewer side effects! could you please clarify this Contradiction ?
5. The general format of the study should be written in the approved journal format.
