Comment

The article is good. The topic of the article is justified. The authors have cited appropriate studies related to animal-human transmission.

One thing that needs to be elaborated on is if studies on wastewater for COVID can be added with references, on how much the prevalence of COVID is in wastewater and if that amount is sufficient enough to cause disease in the following section of the article.

“Measures to prevent and control SARS-CoV-2 at the animal–human interface”

Secondly, the readers would also be interested in knowing the latest information, as we all know that COVID can be transmitted to humans.

- The author needs to specify which studies on wastewater analysis should be added to support his point.
- Recent findings on COVID-19 transmission to humans should be included to update the existing knowledge.
