

# Review of: "The Longitudinal Mean Arterial Pressure among congestive heart failure patients at Felege Hiwot Referral Hospital, Bahir Dar, Ethiopia"

Dragan Matic

Potential competing interests: No potential competing interests to declare.

The paper by Ethiopian authors described an interesting topic, the longitudinal mean arterial pressure among congestive heart failure patients in one hospital.

However, I have some comments.

1. In the Abstract section, conclusion should be more concise.
2. In Materials and Methods section, subsections Statistical analysis and Linear mixed effects model should be merged into one subsection named Statistical analysis. Description of linear mixed effects model should be presented in much shorter way, without mentioning all those formulas.
3. The authors mentioned that 218 patients with heart failure, treated in the outpatient clinic were included into analysis. Were those patients presented in the outpatient clinic as urgent patients or they had scheduled visits.
4. The conclusion section should be much shorter as well.
