Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Poornima Ediga

1 G. Pulla Reddy Engineering College

Potential competing interests: No potential competing interests to declare.

1. There are lot of typos in the full text.

2. The paper is based on interfacing very basic sensors with microcontrollers and is equivalent to undergraduate project work.

3. The text includes the very basic facts about sensors and microcontrollers easily available in undergraduate textbooks.

4. English needs lot of improvements particularly for the grammar and writing style.

5. There is no clear research gap in the introduction and therefore the novelty of the research is questionable.

6. The article is based on the existing available sensors and the framework.

Hence, it is not acceptable at this stage for publication. No novelty.
