NK-cell enteropathy

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. [NK-cell enteropathy](#). ORPHA:263665

Natural killer (NK)-cell enteropathy is a benign NK-cell lymphoproliferative disease characterized by minor abdominal symptoms (abdominal pain, diverticulosis, constipation and reflux) due to NK cell-derived lesions in the mucosal layer of the gastrointestinal tract and often mistaken for NK or T-cell lymphoma (see these terms).
