Potential competing interests: No potential competing interests to declare.

The paper on contractive type mappings in cone metric spaces presents some results. However, there are a few areas that need improvement. The paper contains some grammatical and typographical mistakes that need to be addressed. Additionally, it would be helpful to discuss all the references in the introduction section.

Furthermore, the paper needs a comparison with the existing literature, which is essential to establish how these results are better than the ones already available. The authors could highlight the advantages of their approach and explain how it differs from previous work.

Finally, the abstract of the paper could be more comprehensive. The problem under investigation should be explicitly stated, and the abstract should provide a clear overview of the paper's key findings. By addressing these issues, the paper could be made even more valuable to readers in the field of cone metric spaces.
