

Review of: "[Review Article] Green Strategies for the Synthesis of Quinolone Derivatives"

M. E. Haiba

Potential competing interests: No potential competing interests to declare.

The review article introduces good information about the bioactivity and the synthetic ways of quinolone derivatives, and it could be accepted for publication after considering the following comments:

The manuscript includes both the bioactivity and synthesis of quinolone derivatives. In addition, it mentions different methods for the preparation, including green chemistry as one of these methods. So, please remove "green strategies" from the title and add "bioactivity" or "biological activity" to the title of the article.

Please revise the review article to prevent any grammar mistakes.
