**Potential competing interests:** No potential competing interests to declare.

It is very interesting to work on breast cancer to improve the diagnosis and/or prognosis.

This manuscript discusses the impact of ethnicity on diagnosis and prognosis for breast cancer patients. However, the biological and non-biological characteristics presented are very limited.

The authors should introduce some genes (outside BRCA1/2) responsible for these ethnic differences,

They could show the association between the mutation and treatment with OS and DFS, respectively, for all ethnical studies,

The authors have to give a new element to improve breast cancer patients' care.

I accept to publish this manuscript after these revisions cited above have been included in the text.
