Potential competing interests: No potential competing interests to declare.

The paper presents a meticulous analysis of water security management challenges in Hanoi, Vietnam, showcasing exceptional clarity and depth in its composition. The overall presentation is well-structured, offering a lucid understanding of the methodology adopted. The integration of "Management of Non-traditional Security" and "systems thinking" within the framework is commendable, rendering the approach comprehensible and accessible.

The methodology delineated in the paper is notably clear and easily digestible. The authors adeptly utilize an interdisciplinary approach, employing a semi-quantitative assessment through a 5-point Likert scale across six dimensions. This methodology not only allows for a comprehensive evaluation but also ensures the transparency and coherence of the assessment process.

The results furnished in the study are acceptable and substantiated by the methodology employed. The depiction of Hanoi's water security state, underscored by a clear cause-and-effect relationship, offers valuable insights into the challenges faced by the city. The discussion, elucidating the implications of these results, is remarkably clear and effectively correlates the findings with the urgency for proactive management strategies.

Overall, the paper excels in its clarity, methodology, results, and discussion. Its well-constructed narrative enhances the understanding of water security challenges in Hanoi, making a significant contribution to the field of interdisciplinary water management research.
