**Potential competing interests:** No potential competing interests to declare.

**Title:** Design of an intelligent controller for improving the solar system efficiency

**The authors:** Dib Djalel, Abada Zhour, Bendakir Abdelhakim

## General remarks

1. The introduction to this article is very weak. It does not present the work of other articles and the approaches have not been analyzed.
2. The illustrations of figures are very poor and insufficient. Please clarify the available figure in more details to compare the different curves of a figure.
3. All the figures are suggested to be improved with clear resolutions and reasonable font sizes.
4. There is no detailed comparison analysis with the existing results to show its advantages.
5. References are not cited in the text and they are just written in the reference section

In my opinion, the article cannot be considered for publication. It needs a lot of improvement
