Abstract

- The content structure is not good. The authors restructure the content with the necessary of this problem, methodology and data collection, the highlight of the study results, the meaning of the study results.

Introduction

- The content structure is not good as the scientific article. The authors rewrote the introduction as the scientific manuscript. The content is too long. The authors make clearer the study objective.
- The authors check the citations as the guideline for the author of the journal.
- The authors make clearer the highlight of this study.

Methodology

- Modify the section "Research setting" to "Description of study site"
- The authors need to replace the phrase "This project" to "This study/ research"
- Fig.2: The Vietnam location map adds the Truong Sa Islands, Hoang Sa Islands and East Sea, the scale of map.
- Page 9: Modify "As of 2018" to "In 2018"

Data and Methods

- The authors need to separate data collection and methodology.
- The authors add the flow chart of study structure.
- Fig. 3: The authors need to add the update salinity concentration at Long Phu station to 2022 or 2023.
- Table 4: The authors need to update estimated economic losses to 2022.
- The authors delete the Vietnamese words in the manuscript such as "công nghiệp hoá, hiện đại hoá, thâm canh, tăng vụ, tăng năng suất, etc".

Results and discussion

- Analysis of research results in the manuscript is still quite fuzzy. The author needs to define and specify the analysis of

the results to stick to the original goal.

- What is the Structure, Resource, and Behavior Change model (SRAB) in this study?

Conclusion

- The authors add the study gap and the future work.
- The authors check the format of references.
