TBXT wt Allele

National Cancer Institute

Source

National Cancer Institute. *TBXT wt Allele*. NCI Thesaurus. Code C84456.

Human TBXT wild-type allele is located in the vicinity of 6q27 and is approximately 11 kb in length. This allele, which encodes T-box transcription factor T protein, plays a role in the regulation of transcription during mesoderm formation and differentiation. Gene duplication is associated with familial chordoma.
