The topic of study is relevant and interesting but there are many weak points involves in this. First it should include the review of relevant literature regarding the subject. It must also include the in mathematical model behind the implemented method. Also the data should be normalized before the application of oversampling approach. The result must be compared with the previous studies. Also the paper writing of the article is very weak. It must be re-written in more structured way and precisely describe all the steps in detail.
