Potential competing interests: No potential competing interests to declare.

I do not consider appropriate to cite so many works after the 3 first lines of the introduction and so on.

Results described are from papers of 2020. I recommend to make an analysis from more recent papers.

In RT PCR do not expose results from nasopharynx swabs.

Why did you separate 5.3. from 5.1.? I consider you could join together.

I strongly recommend to show the comparisons among the 3 diseases in a table, instead in text.

Considering the moment: update your references.

Review English, orthographical mistakes, please.
