**Potential competing interests:** No potential competing interests to declare.

The paper has new data about sleep disturbance treatment with photobiomodulation therapy (PBMT), a new approach to this kind of pathology. It is the use of concepts about transcranial PBMT to change the brain's environment inflamed in PD patients to have a good response in sleep conditions. The case report was well described and can be used as a directive to make a Randomized Clinical Trial about the subject using this citation. I suggest using the correct term PBMT in substitution for Low-Level Laser throughout the text of this case report before acceptance.
