The manuscript entitled "Analysis of climatic parameters in the upper Awash River basin of Ethiopia" (Manuscript Qeios ID: 7EYSPY) is indeed interesting and within the scope of the Journal but it needs minor modifications for improvement, and it might be reconsidered for publication after addressing all the issues. Therefore, I have proposed a "major revision" with the following comments:

1. The author did not considering numbering the lines, which made the revision very complicated. The author should add line numbers
2. It seems crop yield is missing in the keywords
3. On Figure 1, the map of Ethiopia seems to have been pulled on the right, consider redoing it!
4. On the section 2.2. of Material and Methods, what were the reasons and criteria did the author used to select these crops amongst others and why? This should clearly be defined.
5. Figure 2 was pulled on the right, and this has distorted the quality of the image. It should be redone.
6. On figure 6, why is that the figure on the left seems different from the rest, consider adding the equations for uniformity.
7. The first sentence of the section 3.2 seems very confusing and difficult to understand, consider rewriting it!
8. The first sentence of the sub-section 3.2.1. should go under the Methodology!
9. The third and fourth sentences under the sub-section 3.1.2. should go under discussion!
10. The first and second sentence of the sub-section 3.2.2 should go under Methodology!
11. In the first sentence of the discussion, "thatmeher-season" stands for what exactly? Consider rewriting it
12. In conclusion, includes the limitations of the study.
