

Review of: "Visualizing the Mind: A Deep Dive into Computer Vision and Psychological Phenomena"

Oday A. Hassen¹

¹ University of Wassit

Potential competing interests: No potential competing interests to declare.

The title of the research is good and new, but the researchers did not explain the mechanism, algorithms, or system they are working on to extract the results.....

2. I have not seen any previous studies through which I could understand the validity of the proposed title, even with a simple explanation

3. It is better for researchers to display the entire content of the research so that we can comment on it in full....

later

Please clarify the following for the research paper to be good.....

4. It would be helpful to provide more specific examples to illustrate potential applications.

5. To provide a comprehensive understanding, consider briefly discussing the importance of essay evaluation and its potential applications in the scenario of industrial psychological phenomena or other related fields. This would help readers understand the motivation behind developing or writing (this) effective research.

6. In the introduction...he needs to strengthen his research paper and prepare for the challenges for which he wrote his research and which he was able to solve.

7. Add a section highlighting the key contributions of proposed future work to demonstrate the strength of your already strong paper at the end of the introduction.

8. Related Works Section: Authors should provide a more difficult survey of related works with very recent references.

9. The author must provide a description of the classification/definition step.

10. For each stage in the proposed framework, the author should include examples and illustrations.

11. Authors should present the performance measures used (such as accuracy) and explain how they were estimated.
