

Review of: "Stellate ganglion block for anosmia and taste disturbance due to Long-COVID"

DATONYE ALASIA

Potential competing interests: The author(s) declared that no potential competing interests exist.

The manuscript is a simple case report of the use of SGB to treat post COVID19 Anosmia. The report is precise and the pathophysiologic basis of the intervention is adequately explained by the authors. the intervention provides an opportunity for many patients with impaired QOL from anosmia to recover.

The use of literature to support the case report and discussion is adequate. I would recommend this for publication
