Dear Author

It is a good effort. I am posting the review points for improvement.

1. Please update the figure with respect to the location of the study area - country - so that readers from other countries can understand.
2. The cross-references of the references are not observed; please incorporate.
3. The grid is used to evaluate the UFW; however, the data and results are not discussed in a grid pattern.
4. The methodology and results should be discussed elaborately.
