Potential competing interests: No potential competing interests to declare.

The article is exceptionally well-written, presenting complex research findings in a clear and accessible manner. The tabulated information on the research is comprehensive and effectively organized, making it easy for readers to grasp the key points. However, it would be intriguing to see additional data related to similar backgrounds in other Southeast Asian countries, given their comparable climates, nutritional profiles, and socioeconomic factors. Overall, this article stands out for its quality and could benefit from further contextualization within the broader regional context.
