

Review of: "Solving Pallet loading Problem with Real-World Constraints"

Peng Guo

Potential competing interests: No potential competing interests to declare.

The paper considers the pallet loading problem and suggests a branch and bound algorithm. The study is interesting, and the solution approach is good. The following comment should be considered.

1. What are the real-world constraints?
2. Please give the corresponding mixed integer programming model of the studied problem.
3. What is the framework of the proposed branch and bound algorithm?
4. Please evaluate the performance of the suggested algorithm.
5. How about the managerial insights of the studied algorithm?
