

Review of: "Factors Affecting the Safety Management Practices of Road Construction in the Sidama Region Road Administration"

Kazem Hosseinzadeh

Potential competing interests: No potential competing interests to declare.

This is a large study with various data and results.

I read the paper carefully, and the following points came to my mind:

1. Title: It was better to add the type of study in the title as follows: Factors Affecting the Safety Management Practices of Road Construction in the Sidama Region Road Administration: A mixed methods study in Ethiopia
2. Abstract: Is not constructive; no evidence of current problems and related figures in; no academic writing $p < 0.01$ instead of statement **variables are statistically significant at a 1% level**)
3. Keywords: are not selected from Mesh.
4. Introduction: good, but long.
5. No section for materials and methods.
6. No obvious method for data collection (structured or other method of interview, deductive or inductive method of analysis, type of content analysis,)
7. No structure for data presentation.
8. Discussion and conclusion: good
