

# Review of: "Haematological and Biochemical Patterns in the Liver Function of a Syrup Made From Vitex Doniana Fruit"

Wasan Ghanem

**Potential competing interests:** No potential competing interests to declare.

**Introduction:** There isn't enough information about the plant mentioned in the research

**Method:**

The number of groups is not specific.

In the manuscript, it is not clear about the syrup of the plant. Describe the method for the preparation of syrup in the Materials and Methods section of the manuscript.

The concentrations of the doses used are too low for measuring the toxicity of the plant.

**Results:**

The results are not discussed from multiple angles and placed into context without being overinterpreted, so the discussion was to review and prove previous research, but it did not explain the results of the effectiveness of this plant and whether it was a pure or raw extract.

The conclusions don't answer the aims of the study.
