Potential competing interests: No conflict of interest

Basically, the article contains loose statements resulting from the ongoing global digital transformation.

It lacks the development of important trends that are currently essential in the responsible management of ICT resources in organizations of developed, examples:

1. The article does not provide important information resulting from the implementation of innovations resulting from R&D work, which in the European Union countries is an important indicator of enterprise innovativeness. Currently, enterprise innovativeness is essentially related to the topic of ICT resource management in the organization.
2. The issue of personal data security - is another important element of ICT resource management in the organization. This important aspect of transferring personal data to third countries as a result of the cross-border development of the e-commerce industry should be developed and examples provided in the article.
3. The issue of cybersecurity - this is another aspect that should be developed in the topic of ICT resource management in the organization. Here, you should indicate personal and organizational competencies that will help create and verify important and complicated processes related to cybersecurity risk management in the organization.
