Dear Authors, I have read with interest your manuscript. This topic is very interesting to discuss because tumors are of great interest and need to be studied because, of course, we need better management.

I think the title is very suggestive and is properly chosen.

The abstract is very vague, and you should clearly reconsider this aspect.

At the same time, you don't have any structure for your study. Please try to reassess the body of this article. I appreciate the content you wrote and I consider it of high importance, but try to bring a structure to your article.

The references list is very small for a review, but also the content of your article is not enough for an article, so you should do more documentation and bring some more studies and evidence to our attention. You should be able to better put into the light this topic and its importance and impact on global health.

Please be more clear regarding your purpose when writing this article.

This topic is very interesting to discuss because we need better management of tumors, and I encourage you to develop your content in this article.
