IMWG Progressive Disease

National Cancer Institute

Source

National Cancer Institute. *IMWG Progressive Disease*. NCI Thesaurus. Code C159811.

Any one or more of the following criteria: increase of 25 percent from lowest confirmed response value in one or more of the following criteria: serum M-protein (absolute increase must be at least 0.5 g/dL); serum M-protein increase at least 1 g/dL, if the lowest M component was at least 5 g/dL; urine M-protein (absolute increase must be at least 200 mg/24 h); in patients without measurable serum and urine M-protein levels, the difference between involved and uninvolved free light chain levels (absolute increase must be greater than 10 mg/dL); in patients without measurable serum and urine M-protein levels and without measurable involved free light chain levels, bone marrow plasma-cell percentage irrespective of baseline status (absolute increase must be at least 10 percent); appearance of a new lesion(s), at least 50 percent increase from nadir in sum of products of diameters of greater than 1 lesion, or at least 50 percent increase in the longest diameter of a previous lesion greater than 1 cm in short axis; at least 50 percent increase in circulating plasma cells (minimum of 200 cells per uL) if this is the only measure of disease.
