Review of: "Generalized N-metric Spaces"

Dr. Naeem Saleem

Potential competing interests: No potential competing interests to declare.

In this article, authors introduced the notion of generalized N-metric spaces, taking inspiration from the idea of path integral in physics. Many cases for different values of N are explicitly verified, mostly giving strong hints to actually be generalized N-metric spaces. Some open questions are proposed. Article is well-written and it will open new horizons in this direction.
