Potential competing interests: No potential competing interests to declare.

While the article provides insights into the implementation of the Hybrid Pico Hydro-Solar Generation System, there are sections where improvement could enhance its overall clarity and impact. Please, specifically, attention could be given to:

- the need for an introduction, which should include a review of the literature about this topic;
- methodology details – information about the contents of questionnaires and interviews. Also too, for example, what was the criterion for choosing the sample population.
- Table 1 – it needs a paragraph to frame it.
- figures, maps – about the Pico Hydro Generation System; about the place/places where the Pico Hydro Generation System was installed.
- to make the article more robust, I believe it will be necessary to add some more references.

I encourage the authors to address these aspects would contribute to a more comprehensive and effective communication of the research findings.
