

# Review of: "Learning Behaviors and Academic Performance: A Comparative Study"

Adnan Ashraf Arain<sup>1</sup>

<sup>1</sup> Mehran University of Engineering & Technology

**Potential competing interests:** No potential competing interests to declare.

The authors writes the case studies and shares experimetnal data on Learning Styles and worked on numebr of hypothesis. The efforts are appreciated but the results leave an inconsistent impact on readers due to the followings.

1. The data presented for many of students doesn't need to part of the body text. Use graphs in reports as there is no need to mention the name of the candidate (the sample in your case) as it shall create no additional trust or value to the paper quality.

2. Add additional reporting graphs by eliminating students' data rather represent the samples through graphs as mentioned above.

3. In results, is discussion is required then ensure the proper heading and sub-headings to make the reader a clearlity of what's being presented in it.

4. It is very strange to see old references in the paper. There has been much work and latest dynamics have been mentioned in this decade and previous.

5. Authors should update the references straightforward to make the research while present some comparison with some fresh work with his own, ,If possible then it should be in the light of hypothesis being analyzed for comparison of both the works.

Hence, author is encouraged to resubmit after improvising the writing style.
