

Review of: "Reef Fish in the Vitória-Trindade Seamount Chain of the Southwestern Atlantic: Biogeographical Corridors and Impact of Fishing"

Rafael Schroeder

Potential competing interests: No potential competing interests to declare.

The MS brings impressive results in biogeographical corridors for the central Brazilian coast. However, the discussion used old literature. The above study may help to improve the discussion section about the connectivity between coastal areas and seamounts.

Crochelet et al., 2020, "Connectivity between seamounts and coastal ecosystems in the Southwestern Indian Ocean, Deep Sea Research Part II."
