Thank you to the author for the manuscript. Please see my concerns bellow. I hope this would help you to improve the article.

- The title Consumption of beverage among students of secondary and intermediate schools in Riyadh would be better.
- In the title, the word beverage is mentioned, while in intro, it is nit mentioned, creating a bit confusion.
- Why the adolescents were studied should be described.
- Suggesting to remove the word multicenter.
- The secondary and intermediate schools should be mentioned in study setting.
- It is better to mention the name of the non random sampling.
- I personally feel that, including parents filling up the questionnaire might not give the actual scenario. If the students consume soda and other unhealthy beverages, they might hesitate to inform.
- Why reference 11 was used for sample calculation? I could find relevant literature in relevant countries.
- I can't see any tables, therefore, cannot be sure of the statistical significance mentioned as I don't know the number of students in each age group.
- How did you measure total consumption? please describe.
- In conclusion, new findings are given that in general, what types of beverages are preferred. It should be in results.
- The significance of age and gender difference does not reflect in the conclusion.
- More recent references should be cited.
