Dear Editor,

After reviewing the paper entitled

(Performance evaluation and analysis of electric vehicle parameters – test platform),

I have some notes:

- 1- The writing language is good.
- 2- The order is incorrect. It is known that a research paper is written as follows: Abstract, introduction, method, results, discussion, and finally conclusions.
- 3- Discussion of the results needs more clarification.
- 4- The conclusions need extensive mention, including a simple summary of the results obtained and comparing them to previous studies to show the extent of their validity, precedence, advantages, and disadvantages.
- 5- The references are few, and more references should be mentioned.

Thank you all.

Kind regards,
