Familial short QT syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Familial short QT syndrome. ORPHA:51083*

Familial short QT syndrome is a newly described cardiologic entity that associates a short QT interval (QT and QTc 300 ms) on the surface electrocardiogram (ECG) with a high risk of syncope or sudden death due to malignant ventricular arrhythmia.
