## Dear Editor:

In this manuscript entitled "**Nanomaterials: History, Production, Properties, Applications, and Toxicities**" (Manuscript ID: 3Y7GTQ), I think it's better to discuss the below questions. Therefore, I suggest a revision for the manuscript before publication.

## Comments:

1. There are many papers about **Nanomaterials: History**, ... ,the authors should be explaining the importance and novelty of the work in more detail.
2. The text can be improved by providing a more critical discussion of the related literature. For example: Analytical Letters 46 (2), 323-339 (2013) / Analytical methods 4 (8), 2475-2485 (2012) / Measurement 145, 300-310 (2019) / Journal of The Electrochemical Society 168 (4), 046514 (2021) / Talanta 247, 123593(2022) / Journal of Alloys and Compounds 831, 154715 (2020) / Bioelectrochemistry 94, 100-107 (2013).
3. The English language should be checked. For example, shorter sentences should be used, "by" or "using," not "by using," and etc.
4. Conclusion: should be supported by data.

Yours sincerely;
