**Potential competing interests:** No potential competing interests to declare.

First, the work done by the authors is valued.

Few remarks:

The methodology is incomplete. There are no inclusion/exclusion elements for the review. No methodological authorship supports the proposal. A systematic methodology is lacking.

The conclusions can be improved.

In their research they refer to the fact that current research makes more extensive use of different methods and under a comprehensive approach, but does not refer to such changes. It would be interesting to make an extraction of the factors of change.

On the other hand, you speak of multidisciplinary without reference to areas.

Finally, the text has some lack of form in the table.

Best regards,
