Pediatric Castleman disease

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Pediatric Castleman disease. ORPHA:93682*

Pediatric Castleman disease (PCD) is a form of Castleman disease (CD, see this term) with a predominant occurrence in teenagers which is either asymptomatic or manifest by systemic (such as fever, anemia, fatigue and failure to thrive) or compressive symptoms.
