Potential competing interests: No potential competing interests to declare.

1. "This paper aimed to provide an interpretation of quantum mechanics through the partitional approach. I believe this is meaningful, making it worthy of publication."
2. "This work is challenging to read and not reader-friendly. The author should include sufficient illustrative examples to facilitate the readers' understanding of the main methods and ideas. For instance, examples should be provided in Sections 2, 3, and 4."
