Potential competing interests: No potential competing interests to declare.

The current review outlines the objectives and methodology of the study but does not provide the results or findings of the analysis conducted by the authors. While the objectives clearly define the scope and aim of the research, the absence of results limits the ability to draw conclusions or assess the implications of the study. To fully evaluate the impact and significance of the research, access to the results and findings would be necessary. Therefore, further information or access to the study's results is needed to understand the outcomes and contribute to informed discussions on the effectiveness and cost-effectiveness of combining ultrasound with AFP compared to using ultrasound alone for HCC screening in at-risk populations.
