Iatrogenic or traumatic pituitary deficiency

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Iatrogenic or traumatic pituitary deficiency. ORPHA:95619*

Iatrogenic or traumatic pituitary deficiency is a rare, acquired, endocrine disorder characterized by deficiency of one or more of the pituitary hormones resulting as a consequence of traumatic or medically-induced injury of the pituitary gland. Clinical presentation is variable depending on the nature and acuity of the injury and the resulting order and amount of hormone deficiency.
