Potential competing interests: No potential competing interests to declare.

Overall, the research project is good but lacks analysis for the data collection. The introduction is well written, as are the method illustration and explanation of the design of input and output. The flow process is explainable. The research presents the prototype design and some data collection. Authors are suggested to define in detail the data analysis and what is novel based on the prototype design and analysis. Many references are cited but not in recent years. Authors should include the DOI for each cited paper.

Thank you.
