

Review of: "Artificial intelligence in the service of health and safety at work: Perspectives and challenges from now to 2035 - A prospective study"

Ferry Fadzlul Rahman

Potential competing interests: No potential competing interests to declare.

The article is clear, well written and organized.

The methodology is clearly explained and well executed.

Although this is a somewhat limited study (small number of participants), the information obtained allows us to draw some relevant recommendations for the use of AI in the prevention of occupational risks and opens the door to other, more in-depth studies focused on the role artificial intelligence in the prevention of occupational risks.
