# Complete Trisomy 21 Syndrome

National Cancer Institute

## Source

National Cancer Institute. *Complete Trisomy 21 Syndrome*. NCI Thesaurus. Code C101222.

A syndrome characterized by the presence of three complete copies of genetic material for chromosome 21, instead of the normal two. It leads to a variety of abnormalities that include mental retardation, macroglossia, microgenia, epicanthic eyelids, and a single transverse palmar crease.
