I have carefully read this work and in my opinion it is still far from being considered a research or review article. If the author wants this to be a review article on the methodologies used to study volatility in cryptocurrencies, he would have to make specific mention of the work that has been done on cryptocurrencies using these methodologies.

If the author wants this work to be considered for publication, he should undertake a more detailed review of the literature on the topic to be addressed.

Likewise, the introduction does not contain the motivation of the work and the conclusions are not as such.
