Potential competing interests: No potential competing interests to declare.

I suggest that paper needs major revision before acceptance.

1. The objective and methodology of the paper need to be revised.
2. The author should provide details on how each of these cloud service models is utilized within the context of the Foods.Data Automation Platform. A brief explanation or example for each service type could enhance the reader's comprehension.
3. Elaborate on how Firebase is integrated into the platform, including any challenges or advantages it brings to the data synchronization process.
4. The configuration runtime of 80%-95% need to be explained to provide additional details on what these configuration parameters represent and how they impact the functionality or efficiency of the platform.
